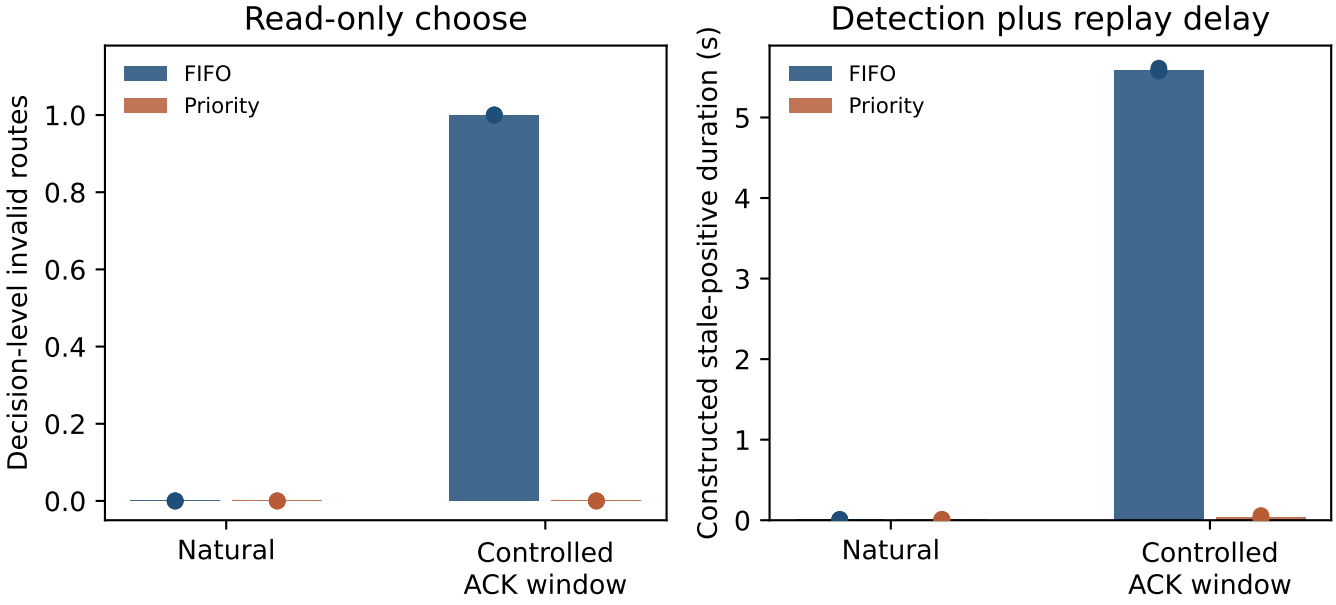
Fig. 6(b) candidate — invalidation priority



Formal seeds 2026101920–22. One read-only choose per cell, 2.372 s after enqueue.
Natural left the queue empty. Controlled held one frame and delayed each ACK by 0.792 s, frozen before these seeds.
Duration adds the observed reset-to-clear interval (~5 ms) to the timed-replay apply delay.
Executed requests saw cached tokens 0 on the stale route and 4096 after the tombstone. They are not these bars.
